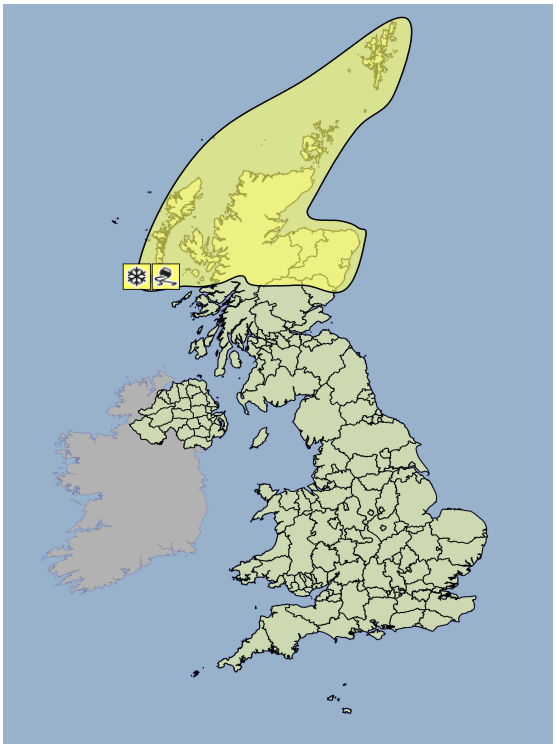
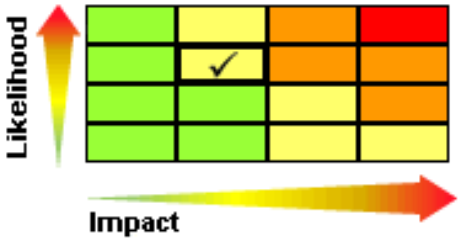
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold, showery north to northwesterly airstream will continue to affect Scotland this week. The airstream will turn colder on Monday night, allowing accumulations of snow to lower levels than over the past few days. In addition, where surfaces have been left wet by rain or sleet showers on Monday, there will be a risk of ice as road temperatures fall below freezing.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **18:00 on Mon, 22nd Feb 2016** until **11:00 on Tue, 23rd Feb 2016**

Frequent sleet, snow and hail showers will continue to affect much of northern Scotland, with snow falling increasingly to low levels. 2-5 cm is likely to accumulate on high ground above 200 m, with 1-3 cm on lower ground. Ice may also develop on untreated surfaces.

Please be aware that the icy stretches and snow may lead to some difficult travelling conditions and some low level disruption, especially over the higher routes.
